

Error Delayed is Not Error Handled: Understanding and Fixing Propagated Error- Handling Bugs

Haoran Liu, Shanshan Li, Zhouyang Jia,
Yuanliang Zhang, Linxiao Bai, Si Zheng,
Xiaoguang Mao, Xiangke Liao

National University of Defense Technology

2025.06.23

☐ Error Handling Bug (EH Bugs)

- Missing proper handling of errors in software systems.

```
FILE fp = fopen(...);  
if (fp == Null)  
    ...  
else  
    ...
```

Error Handling Code

```
FILE fp = fopen(...);  
?  
fgets(str, N, fp);
```

Error Handling Bug
(EH Bug)

Impact

➤ Threatening software reliability

- Halting industrial control software ^[1]
- Global service downtime ^[2]
- \$370 million loss ^[3]

➤ Hard to fix

- Heavy Manual Effort
- Partial Solution

[1] Israel National Cyber Directorate. [CVE-2024-38435](#) Jul. 2024.

[2] Lars Rabbe. [skype reveals a bug in its windows client was what crashed its- system](#). Feb. 2010.

Existing Approaches

➤ General APR approaches

- Mutation based

- ✓ Mutation strategies^[4-6]

- ✓ Templates^[7,8]

Existing Approaches

➤ General APR approaches

- Mutation based
- Generation based

General APR approaches **highly
rely on tests to verify the
generated patches**

What's new for EH Bugs?

➤ Fixing EH bugs

- Template based^[14]
 - ✓ Replicate **near-by** EH code snippets

(a) EC

(b) EP

(c) EO

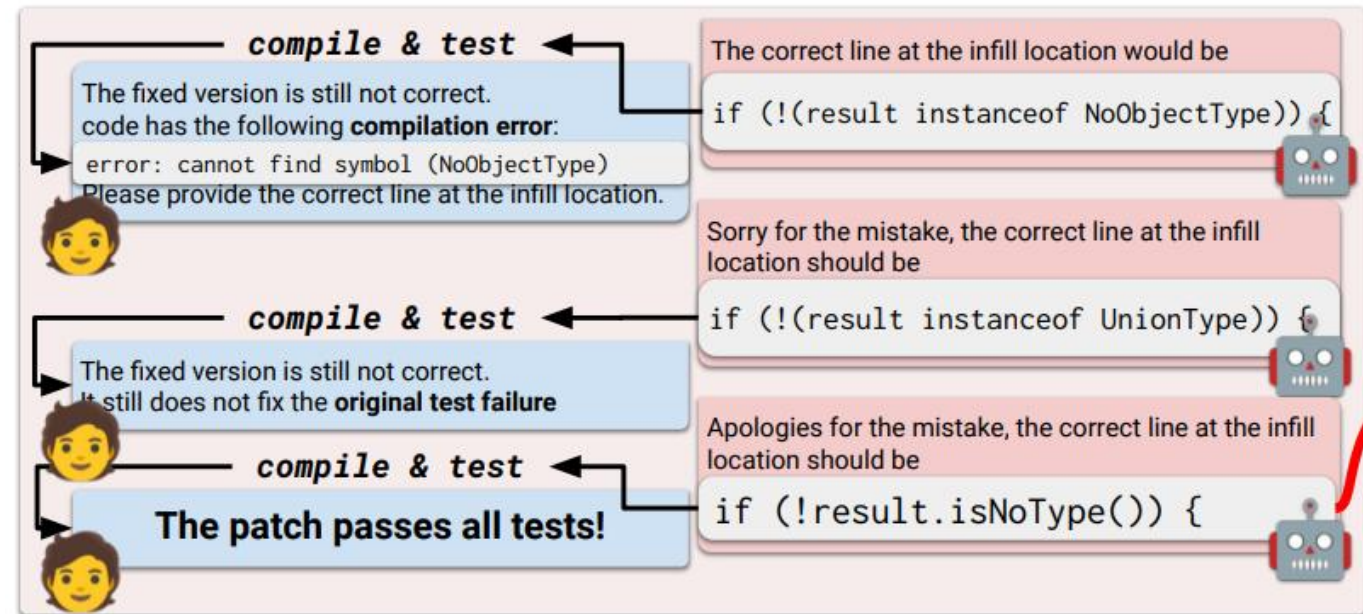

(d) RR

What's new for EH Bugs?

➤ Fixing EH bugs

- LLM based^[11,12]
 - ✓ Iterative **compile&test** feedback

Are we good?

[11]. Xia C S, et al. Keep the Conversation Going: Fixing 162 out of 337 bugs for \$0.42 each using ChatGPT. ISSTA. 2024

[12]. Chen Y, et al. When Large Language Models Confront Repository-Level Automatic Program Repair: How Well They Done. ICSE. 2024

Limitations

➤ EH bugs may **propagated** (PEH Bug)

- Affecting multiple functions
- Repairs may introduce new bugs

Studied 11 software systems from 9 domains

✓ **41.9% (367/876)** of errors are **propagated**

✓ Affecting an average of **16.7 functions**

✓ Requiring **44.1 days** to repair

Patch
in 4.0

```
1 static int __spi_sync(...) {  
    ...  
2 +   status = __spi_validate(spi, message);  
3 +   if (status != 0)  
4 +       return status;  
    ...  
5 }
```

```
6 int spi_sync(...) {  
    ...  
7     ret = __spi_sync();  
8     return ret;  
    ...  
9 }
```

Patch
in 4.16

```
10 static int mchp23k256_write(...) {  
    ...  
11- spi_sync(flash->spi, &message);  
12+   ret = spi_sync(flash->spi, &message);  
13+   if (ret)  
14+       return ret;  
    ...  
15 }
```

Limitations

➤ EH bugs may **propagated (PEH Bug)**

- Affecting multiple functions
- Repairs may introduce new bugs

Existing work mainly
focus on **individual
functions
(intra-procedure)**

Patch
in 4.0

```
1 static int __spi_sync(...) {  
    ...  
2 +   status = __spi_validate(spi, message);  
3 +   if (status != 0)  
4 +       return status;  
    ...  
5 }
```

```
6 int spi_sync(...) {  
    ...  
7     ret = __spi_sync();  
8     return ret;  
    ...  
9 }
```

Patch
in 4.16

```
10 static int mchp23k256_write(...) {  
    ...  
11- spi_sync(flash->spi, &message);  
12+   ret = spi_sync(flash->spi, &message);  
13+   if (ret)  
14+       return ret;  
    ...  
15 }
```

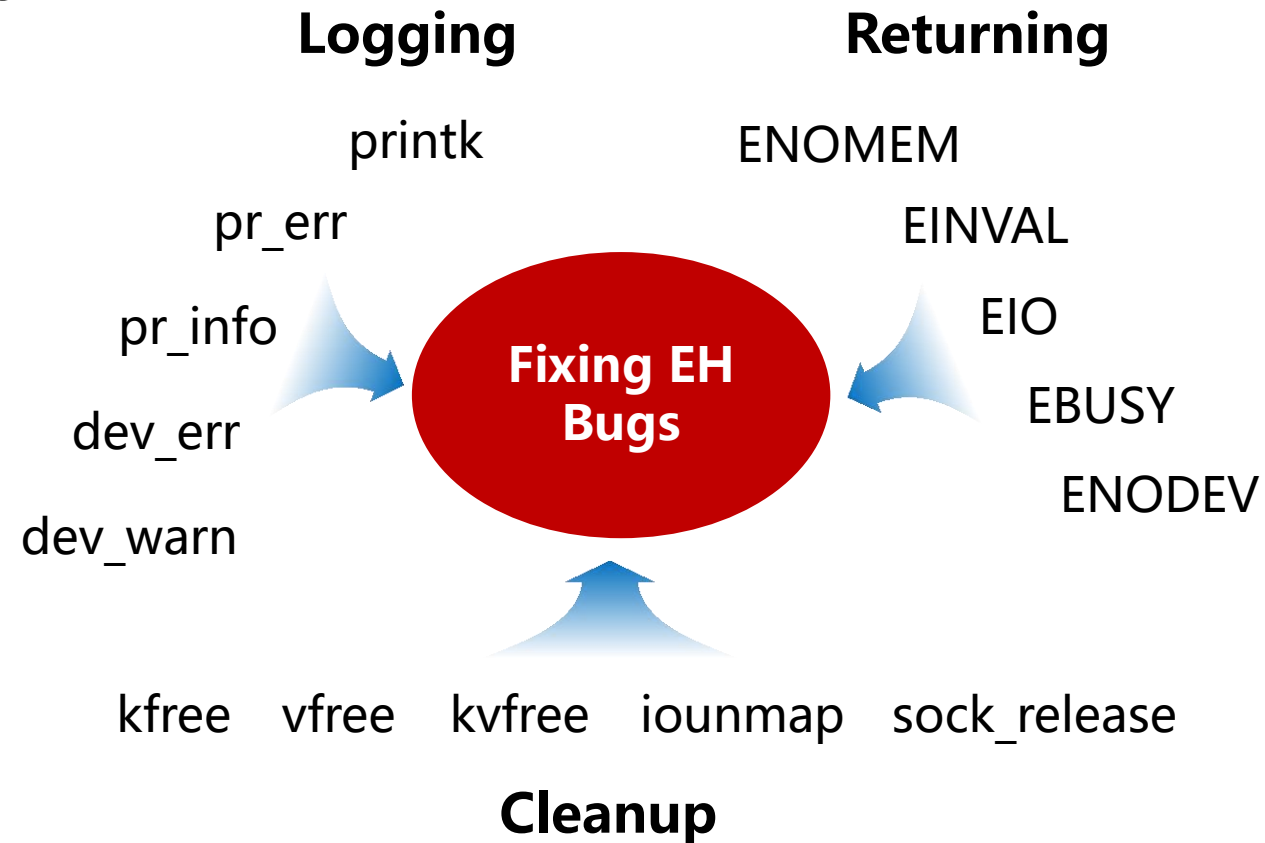

☐ Limitations

➤ Diverse error-handling strategies

- Error-handling **strategies vary** across different functions
- **Diverse optional** handling actions

**Replicate near-by EH
code **can't handle the
divergency****

Insight

- Resolving error-handling bugs requires a **step-by-step fix along the propagation path**

Insight

➤ **Resolving error-handling bugs requires a step-by-step fix along the propagation path**

- Semantic understanding capability

Understanding and Fixing PEH Bugs

➤ Challenges (1/3)

- Tracing the propagation path

Patch
in 4.0

```
1 static int __spi_sync(...) {  
    ...  
2 + status = __spi_validate(spi, message);  
3 + if (status != 0)  
4 +     return status;  
    ...  
5 }
```

```
6 int spi_sync(...) {  
    ...  
7     ret = __spi_sync();  
8     return ret;  
    ...  
9 }
```

Patch
in 4.16

```
10 static int mchp23k256_write(...) {  
    ...  
11- spi_sync(flash->spi, &message);  
12+ ret = spi_sync(flash->spi, &message);  
13+ if (ret)  
14+     return ret;  
    ...  
15 }
```

Understanding and Fixing PEH Bugs

➤ Challenges (1/3)

- Tracing the propagation path
 - ✓ Studied **11** software systems from **9** domains

❑ Return values (85.7%)

❑ Parameters (12.3%)

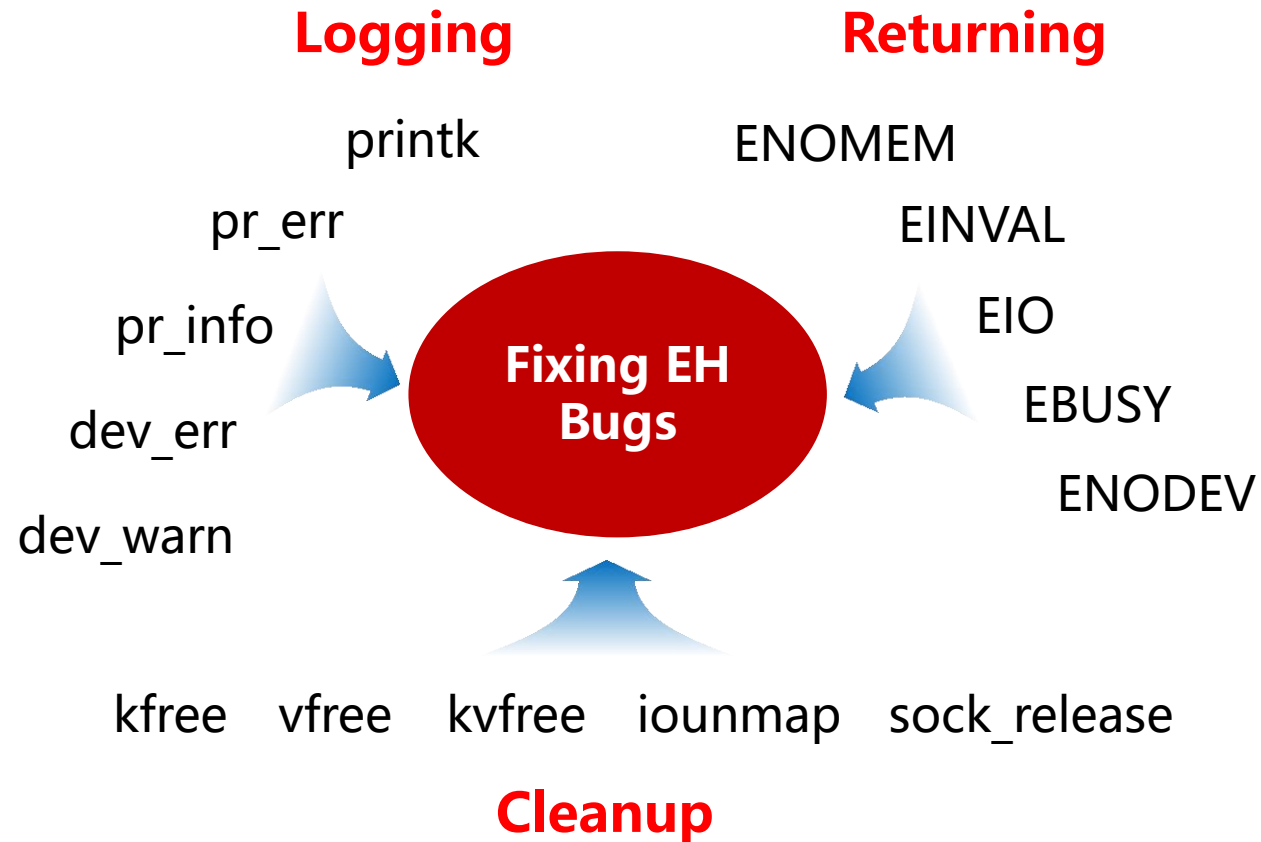

```
+ if (err)
+     return NULL;
```

☐ Understanding and Fixing PEH Bugs

➤ Challenges (2/3)

- Selecting proper handling **strategies** and **actions**

☐ Understanding and Fixing PEH Bugs

➤ Challenges (2/3)

- Selecting proper handling **strategies** and **actions**

- ✓ Studied 11 software systems from 9 domains

☐ Existing EH code snippets can guide the selection:

- In the **same file**

- In the **same propagation path**

- Corresponding to **same specific resources**

Understanding and Fixing PEH Bugs

➤ Challenges (3/3)

- Validating the generated patch
 - ✓ Lack of test cases

Understanding and Fixing PEH Bugs

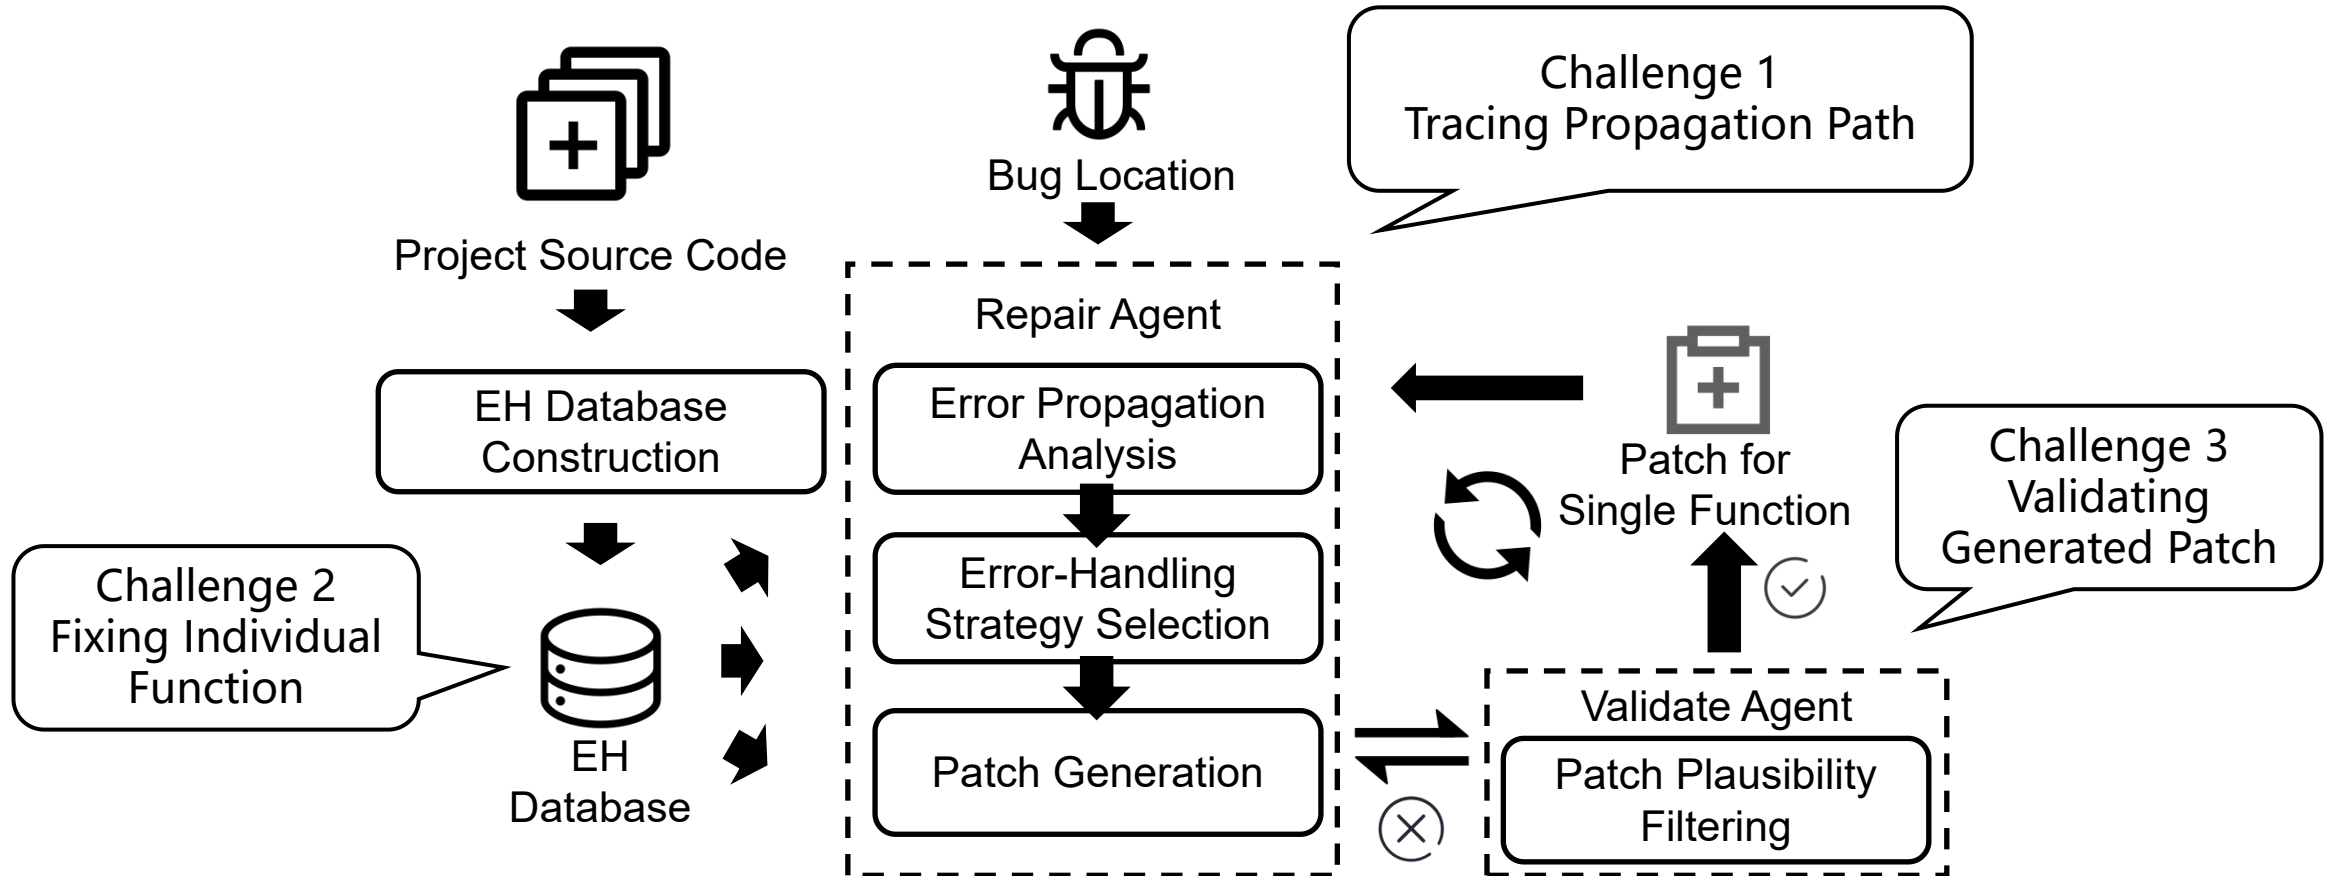

➤ Challenges (3/3)

- Validating the generated patch
 - ✓ Collected 600 incorrect patches generated by LLMs
 - ❑ Non-existent return values (52.8%)
 - ❑ Non-existent cleanup functions (43.3%)
 - ❑ Irrelevant modifications (43.1%)
 - ✓ Validate generated patches
 - ❑ Static analysis
 - ❑ LLMs

Workflow

➤ APR approach for PEH bug: EH-Fixer

- Leveraging “Propagation–Repair”

Design

➤ Construction of EH Database

```
1 static int max1111_read(...) {  
    ...  
2     err = spi_sync(data->spi, &data->msg);  
3     if (err < 0) {  
4         dev_err(..., "spi_sync failed", ...);  
5         mutex_unlock(&data->drvdata_lock);  
6         return err;  
7     }  
    ...  
8 }
```

Source Code

Semantics and Dependencies

1) Summary: "This function reads data from the MAX1111 ADC device for a specified channel. It locks a mutex, configures the transmission buffer, sends a SPI command, and retrieves the result. If the response is valid, it processes and returns the data; otherwise, it returns an error code."

2) CallGraph, Data/Control Dependencies Graph

Available Action

3) Cleanup: (max1111_data->drvdata_lock, mutex_unlock)

4) Logging: ("/drivers/hwmon", dev_err)

5) Return: ("/drivers/hwmon", "-EINVAL")

Error Impact & Action set

6) <"SPI transmission failure", ("Logging", "Resource cleanup", "Early stop")>

7) <"Cannot pass input data for caller functions", ("Propagate error")>

EH Dataset

Design

Prompt Structure of the Repair Agent

Experiment

➤ Dataset

- 10 software in 8 domains
 - ✓ **89 historical** PEH bugs
- Comparative approaches
 - ✓ Template-based
 - ❑ ErrDoc (FSE 17)
 - ✓ LLM-based
 - ❑ ChatRepair (ISSTA 24)
 - ❑ RLCE (ICSE 24)

Domain	Name	PEH Bugs
Operating System	Linux Kernel	44
	Networking	11
Developer Tools	ESP-IDF	7
	BPF Compiler Collection	4
Database	Redis	6
Window Manager	Sway	5
	Mutter	2
Emulator	iSH	4
Media	HandBrake	4
Data Transfer Tool	Curl	2

Experiment

➤ Performance on Real-World PEH Bugs

- Fixing new PEH bugs
 - ✓ Fixed **9 new** PEH bugs in Linux Kernel
 - **2** confirmed by developers, others are pending
- Fixing historical PEH bugs
 - ✓ Repair rate of **83.1%** (74/89)

Experiment

➤ Comparison with the State-of-the-art

- **48.6% (36/74)** PEH bugs fixed by EH-Fixer **cannot be fixed** by all comparative approaches

Table 3. Comparison in real-world bugs.

	Precision	Repair Rate
ChatRepair	13.7%(61/445)	14.6%(13/89)
ErrDoc	28.3%(126/445)	30.3%(27/89)
RLCE	38.0%(169/445)	42.7%(38/89)
EH-Fixer	72.1%(321/445)	83.1%(74/89)

Summary

➤ Contributions

- Studied 153 PEH bugs from 11 software systems, revealing the limitation of existing approaches
- Proposed EH-Fixer to step-by step repair PEH bugs automatically
- Built a dataset of 89 real-world PEH bugs for future study, and evaluate the effectiveness of EH-Fixer
